

# INSTALLATION RECOMMENDATIONS

D.J.A. Imports provides these recommendations as guidelines. Gates must be structurally sound and self-supporting with proper foundation.

Gate must be built to industry and locality standards by professionals. When calculating weight and determining system size, the following should be considered: type of gate, field and weather conditions, structural considerations including wind load.

DJA recommends gates be designed and built by knowledgeable professionals including engineers familiar with local, state, and industry guidelines as well as prevailing codes.
